PROFILE

Junior Full Stack Developer with hands-on experience in the financial sector (fintech). I worked as an IT intern, where I built and maintained APIs in Python and Node.js, automated manual processes with n8n, and provided technical support for critical automation initiatives, always working with Git version control and mandatory Pull Request code review before every production deploy. The contract ended in April 2026 when the company shut down. I also build independent projects to consolidate technical knowledge, such as Myggdrasil, an application for recording personal decisions and tracking their consequences over time, built with NestJS, TypeScript, Kafka messaging, and graph-based relational modeling. I am currently studying Systems Analysis and Development and deepening my knowledge of Full Stack Python and Kubernetes through EBAC. My long-term goal is to move into information security, specifically red team and SecOps, combining my development background with an ongoing interest in understanding and mitigating system vulnerabilities.

CORE SKILLS

Backend	Node.js, NestJS, Python, RESTful APIs, microservices architecture
Frontend	React, TypeScript, HTML5, CSS3, responsive design
Messaging & caching	Apache Kafka (event-driven architecture), Redis (caching, session/token)
Database management	PostgreSQL, MySQL, MongoDB: normalization, queries, production maintenance
Cloud & DevOps	AWS (Lambda, S3), Docker, Kubernetes (in progress), CI/CD pipelines
Automation	n8n, Selenium, Python scripting, workflow optimization
Methodologies	Agile/Scrum, Spec-Driven Development, Object-Oriented Programming

PROFESSIONAL EXPERIENCE

IT Intern, Full Stack Developer <i>Entrepay (Fintech), São Paulo, SP</i> <i>Contract ended when the company shut down.</i> - Developed and maintained RESTful APIs and microservices using Python and Node.js for a high-demand financial platform - Built automation workflows with n8n to integrate corporate systems and reduce manual intervention - Developed data validation and correction scripts to ensure financial data integrity in production - Provided technical support for a chargeback automation initiative, connecting business rules to databases and internal APIs - Collaborated with the team using Git and Pull Requests, with mandatory peer code review before every production deploy	Aug 2025 – Apr 2026
English Teacher, Language Monitor <i>Wizard by Pearson, São Paulo, SP</i> - Provided personalized support focused on language development and adaptive methodologies for diverse students - Led classes with advanced bilingual communication (English and Portuguese), making complex concepts easier to understand - Developed technical communication skills by explaining complex concepts in an accessible way to non-technical audiences	Oct 2023 – Jul 2024

PROJECTS

Myggdrasil - Full stack decision journal: each choice becomes a navigable node, with context and consequences connected like a tree. NestJS backend and React/Vite frontend already integrated and functional end to end - JWT (RS256) authentication with HttpOnly cookie sessions; ownership-aware access control and bcrypt-hashed passwords - Full decision CRUD and parent/child relationships between events (N:N), with protection against self-links and duplicate links - Event-driven welcome email flow: a Kafka consumer reacts to user signup and triggers the email via Nodemailer/Mailgun - Stack: NestJS, TypeScript, TypeORM, MySQL, Kafka, React, Vite	
International Sanctions ETL Pipeline - Automated pipeline for collecting compliance data (OFAC, UN, EU): download, CSV/JSON parsing, and indexing into MongoDB via AWS Lambda and S3 - Removed the compliance team's manual list-checking step by exposing the data through an API	

EDI File Automation Standalone Python/Selenium script that reduced manual effort in generating reports and syncing data with external systems	
--	--

EDUCATION

Associate's Degree in Systems Analysis and Development <i>Faculdade Impacta de Tecnologia, São Paulo, SP</i> <i>August 2025 – December 2027 (in progress)</i>	
Full Stack Python Program <i>EBAC, Online</i> <i>February 2025 – December 2026 (in progress)</i>	

High School Diploma <i>Paulista Instituição de Ensino (Rodolfo Pirani), São Paulo, SP</i> <i>January 2021 – December 2024</i>	
--	--

Corporate AWS Workshop <i>Amazon, São Paulo, SP</i> <i>Completed</i>	
---	--

CERTIFICATIONS

- Pearson Edexcel ESOL International Certificate (PEIC), CEFR B1, November 2023
- Artificial Intelligence II: Deepening the Study of Artificial Neural Networks
- English Course Proficiency, Wizard by Pearson
- Integrative Project, Sabor Local (No Code / Low Code)

LANGUAGES

Portuguese (native) · English (fluent, C2)
